Correction – Westside Sac is in Sacramento River so it may be covered – that said, the Sac River chapter is almost silent on Clear Lake/Cache Creek- which means that there's very little discussion re the largest freshwater lake entirely within CA and Lake County

Also, some kind of high level summary of key concerns/challenges for each hydrologic region may be merited.

The comments below may be relevant for all of the hydrologic region sections- Sachi

Having recently completed two IRWM Plans with 2 others in process, here are my high-level suggestions

a. In the San Joaquin Region- there are two IRWM plans that are not mentioned

-Westside Sac (updated and expanded) IRWM – can be downloaded at <http://westsideirwm.com/irwmplan/>

-New -Tuolumne-Stanislaus IRWM can be downloaded at: <http://www.tudwater.com/projects-development/integrated-regional-water-management-plan/>

A New IRWM Plan for the Yosemite-Mariposa Region is under preparation (to be completed in Q3 2014)

<http://www.mcrd.net/Pages/IRWMP.aspx>

And an updated IRWM Plan for Tahoe Sierra is under preparation- website under development

b. I suggest adding non-federally recognized tribes to the list (see DWR state tribal contacts on getting that info)

c. Westside Sac has tribes as described in IRWM Plan- none noted in Table SJR-11

d. DAC mapping (note that there are 3 types of maps that all need to be superimposed to get a full picture) to supplement tables would help describe the need as well as a sense for % population of the region/counties that are DAC

e. a graphic representation of water balance may tell a better story than the tables – see Westside IRWM for some examples

f. Overview maps of the various IRWM region boundaries within the hydrologic region would be useful with links to the various plans for more detailed information

Feel free to contact me if you have questions- Sachi
